

How to use Tannin Remover

Updated 8 days ago

Consult the [TDS](#) prior to using Tannin Remover.

Materials needed

1. [Tannin Remover](#)
2. Clean cloth

Video

Application process

1. Spray Tannin Remover on the spot or stain.
2. Allow several minutes for absorption.
3. Dab dry with a cloth or a paper towel (do not wipe!).
4. Clean the whole surface thoroughly after. Use a damp cloth for this or [clean with Surface Care Spray](#).
5. Allow the surface area to dry.

Tips

- Before using Tannin Remover, attempt to remove the stain using Surface Care Spray.
- We highly recommend that you first test the product on a non-visible part of the wood, to test the effect of the product on your specific wood type.
- For the removal of stubborn stains, you may need to repeat the application process several times until the stains have completely disappeared.
- After treatment with Tannin Remover or if the stain has penetrated too deeply into the wood, it may be necessary to locally reapply some oil in the original color.
- Do not use Tannin Remover on surfaces treated with reactive products (ex: Fumed).
